Task 5: Observe IAM configuration details by using the AWS CLI.

In the terminal window, test the IAM configuration by running the following command:

```
aws iam list-users
```

```
[ec2-user@ip-10-200-0-222 ~]$ aws iam list-users
{
    "Users": [
        {
            "Path": "/",
            "UserName": "awsstudent",
            "UserId": "AIDAWMVBQSW2OVOU6MDJA",
            "Arn": "arn:aws:iam::439499134388:user/awsstudent",
            "CreateDate": "2024-10-30T11:02:35+00:00"
        }
    ]
}
```

A successful test shows a JSON response that includes a list of IAM users in the account.

End of Task 5!
